

Main Objectives of Coordination Center

- Enhancing public-private cooperation and communication on security issues
- Continuous exchange of views and good practices to improve the level of infrastructures security
- Ability to exchange information among:
- a) national authorities
- b) emergency responders involved in CI protection
- c) CI operators.

It has pilot function for research and informative purposes to the CIs operators and state Institutions.

CC for CIP

Goals:

| Establishment and systematization of cooperation between CI operators and emergenc |
|---|
| responders |

- **Sensibilization** of CI operators to security and risk management issues
- Improvement of the exchange and flow of information on the identification and management of risks and threats
- ☐ Collection of typological **vulnerability** estimates
- Support of CI operators for the improvement of CI security with hazard identification of the CI surrounding area and CI risk assessment
- **Research** on real incidents and their management for the development of strategies based on actual data
- With the aim to maintain and enhance operational capabilities of CIs
- With the aim to protect citizen life quality with uninterrupted operation of CIs

Societal resilience

Main Objectives of the Coordination Center

Managed hazards:

- Man-made Threats
- Natural Hazards
- Technological hazards and accidents

Main functionalities:

- Incorporated vulnerability assessment per CI type
- Risk assessment per CI type with all hazards approach (Risk matrix)
- Regular Information on the level of Risk to CI operators and State Institutions
- Inbound information from Incident Reporting Application
- Creation of Incidents database
- Incidents mapping at country level

Physical infrastructure of CC

- Premises for hosting and installation of CC
- Logistics Infrastructure (h/w-s/w)
- ✓ Videowall
- Videoconference system
- 2 workstations (power PCs) + 6 PCs
- 2 servers
- **GIS platform**
- **GIS Server**

Two main applications are developed within the GIS platform and its online feature:

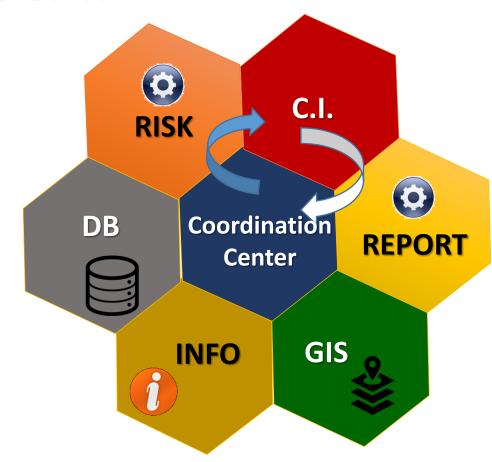

RISK

Software for the creation of maps for spatial distribution of risk for CIs

Registration of incident reporting: national (critical infrastructure CIWIN warning information network)

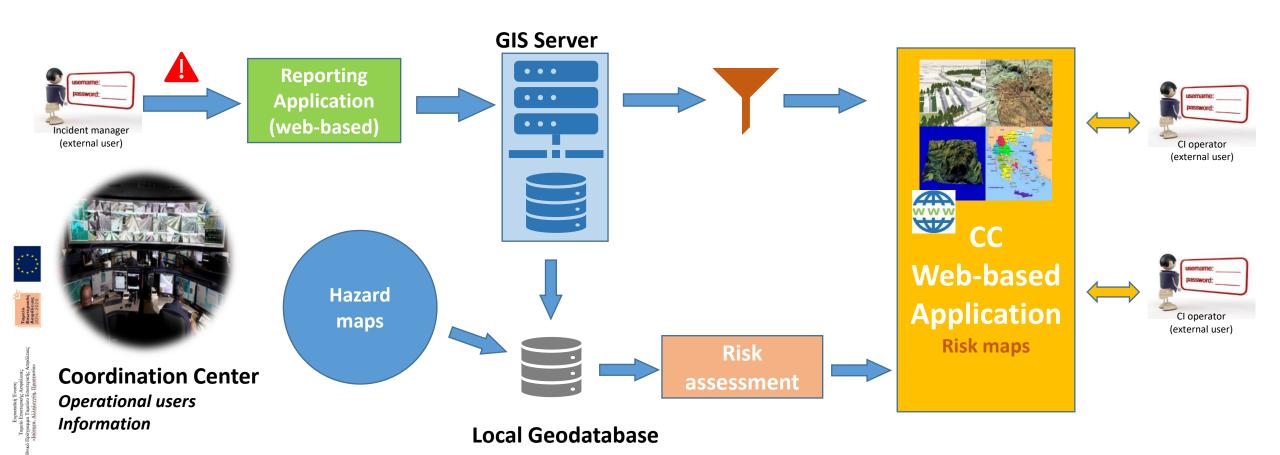

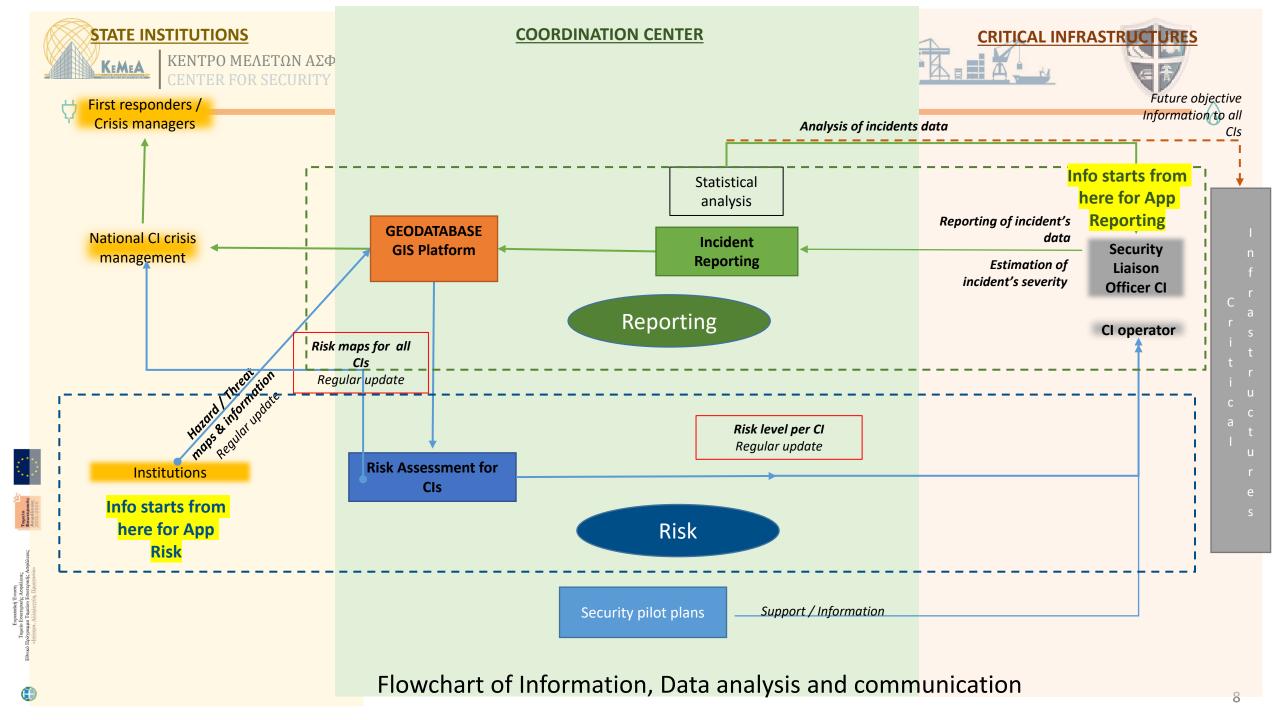

CC Platform Architecture and Information Flow

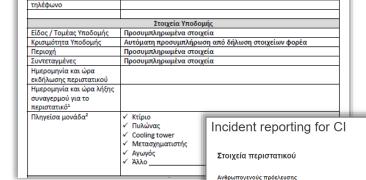

- Developed online-GIS environment at KEMEA's server
- Web-based application with secure portal
 - ✓ Registration of CI Security Liaison Officers
 - ✓ Completion of incident reporting form by SLO at real-time (ideally)

Information required in the Incident reporting form

(time required: 2min)

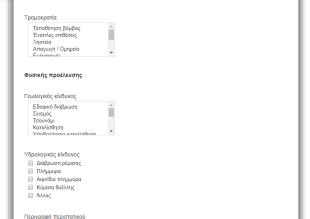

- ☐ Data of CI operator
- ☐ CI data
 - ✓ Type / Sector
 - ✓ Location
- ☐ Incident's data, e.g.:
 - ✓ Start/end hour
 - ✓ Origin (natural, man-made, accident)
 - ✓ Impact
 - ✓ Severity characterization

Στοιχεία λειτουργού

2. Incident Database

App REPORTING: 2. Incident Reporting Database

Information to be included:

- Date
- Asset coordinates
- CI section (Energy, Transportation) and subsection
- Nature of hazard \rightarrow natural (&type); man-made (&type)
- **Incident description**
- Severity of Impact (Scale 1 to 5)
- Operational disruption
 - ✓ Yes/No; number of disruptive events
 - ✓ Duration of disruption
 - ✓ Affected population
- Structural impact
 - ✓ Yes/No; % loss
 - ✓ Affected population
 - ✓ Affected employees
- Cascading impact to other CIs
- Use of alternative asset or CI Y/N

This information can be collected at a later stage

App REPORTING: 3. Incidents statistical elaboration

Statistical elaboration takes place in automatic manner based on the information stored in the Incidents Database.

Results include istograms:

- Incident types within CI sector
- Intersectoral presentation per type of incident
- Absolute values and ratios

Goal:

- ✓ CI operators
- ✓ State Institutions
- ✓ Emergency responders

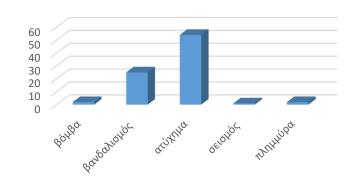

With the aim of:

- ✓ Risk awareness
- ✓ Configuration of security policies

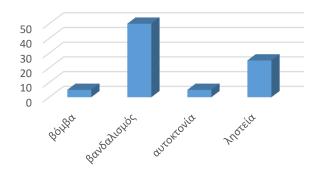

Incidents per CI Transportation Type

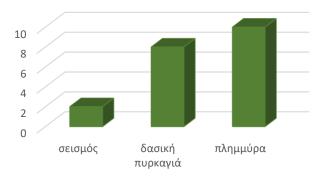

Several incidents type (CI: Road network)

Man-made threats

Natural hazards

Indicative examples!

App REPORTING: 4. Incidents mapping

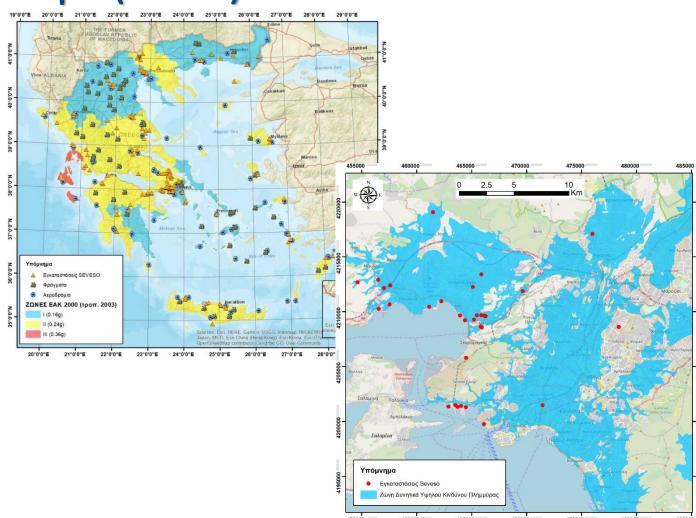

App RISK: Input: Hazard maps (static) from State Institutes

- Seismic hazard zones
 - ✓ Source: EAK2000, EN1998-National Annex, Earthquake Planning and Protection Organization

✓ Source: Floods Directive 2007/60/EC, Special Secretariat for water **ΥΔΑΤΩΝ**

App RISK: Input: Hazard / Danger maps (per day)

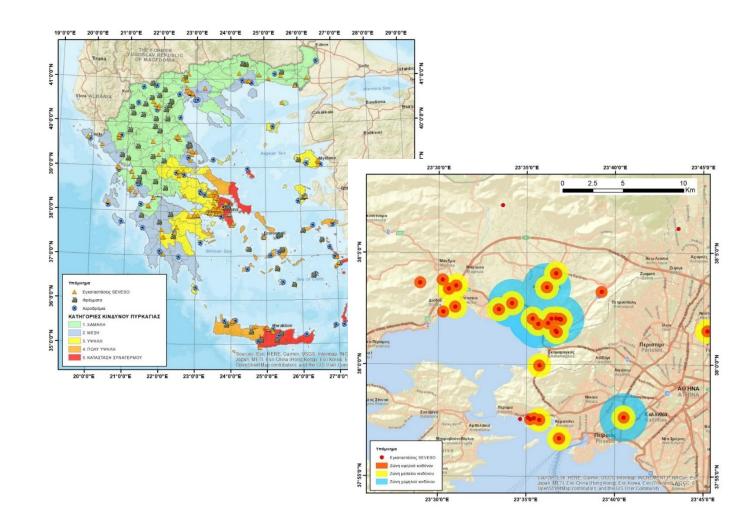

- Fire danger estimates
 - ✓ Source: General Secretariat of **Civil Protection**

✓ Source: Hellenic Police

✓ Source: CI operators

Risk assessment with the use of Risk Matrix:

- ✓ Recognition, mapping and spatial distribution of hazards/ threats
- ✓ Qualitative Vulnerability estimation by CI type and by probable hazard / threat
- ✓ Identification of Interconnections and Interdependences among CIs
- ✓ Impact Assessment (structural failure / operational disruption)

- Risk analysis (at 5 states) per CI type
- Geographical distribution of results
- Information of CIs for their expected risk via web-GIS secure environment

App RISK: Risk Matrix

Risk/Impact forecast

| RISK | IMPACT | | | | | | |
|----------------|---------------|----------|----------|----------|--------------|--|--|
| LIKELIHOOD | INSIGNIFICANT | MINOR | MODERATE | MAJOR | CATASTROPHIC | | |
| ALMOST CERTAIN | LOW | MODERATE | HIGH | CRITICAL | CRITICAL | | |
| LIKELY | VERY LOW | MODERATE | MODERATE | HIGH | CRITICAL | | |
| POSSIBLE | VERY LOW | LOW | MODERATE | MODERATE | HIGH | | |
| UNLIKELY | VERY LOW | VERY LOW | LOW | LOW | MODERATE | | |
| RARE | VERY LOW | VERY LOW | VERY LOW | VERY LOW | LOW | | |

(KEMEA Template for Risk assessment, 2018)

The risk matrix is customized per

- ✓ Type of hazard
- ✓ Type of asset As qualitative vulnerability estimates per Type of hazard and asset are communicated from Security Liaison Officers of specific CIs with whom KEMEA has open collaboration

Loss Database

Compiled by CC members from publicly released information on natural and man-made incidents that affect CIs → This is compatible to Priority 1 of Sendai Framework for DR understanding
